

Regain Your Independence

Magnicam/Triad

If you find yourself isolated by low vision problems like Macular Degeneration, our products will help you achieve self-sufficiency!

- **Stronger than a magnifying glass**
- **Less expensive than a regular CCTV**
- **Focus Free**
- **Magnification over 56X on a 35" TV**
- **Can be used with a television set, or a personal computer with optional adapter.**

The first, and best known of the black and white mini-systems on the market. Magnicam™ and the color Triad are used by thousands of individuals with low vision problems. If you need an affordable and effective means of magnifying written material up to as much as 56X when connected to a 35 inch monitor, then Magnicam is the answer.

The Triad offers the same lightweight portability and magnification range as the Black and White system, but in addition it displays images in full-color. The user can easily switch from color to black and white and then to enhanced color. Positive to negative black and white viewing is readily available and the enhancement adjustment gives sharp black and white or intensified color images.

With clear and steady CCD camera images both units are focus-free and can magnify images on round or flat surfaces. At your choice they provide automatic switching between television viewing and magnification..
